Smart Expense Tracker - Quick Setup Guide

What you need:

- A Google account
- A laptop/desktop for the Google Sheet setup
- Your iPhone or Android phone

Important: Set up your personal Google Sheet first. Then connect your phone using your personal Web App URL.

STEP 1 - Create Your Personal Google Sheet

Do this on a laptop or desktop.

1. Click **Product Link** in your purchased resources.
2. Open the Google Sheet template.
3. Click **Make a copy** to create your own private Google Sheet.
4. Your copy includes the **Transactions** sheet and **Expense Analytics Dashboard**.
5. Go to **Extensions -> Apps Script**.
6. The script is already available in your copied sheet. Create a **New Deployment** and deploy it as a Web App.
7. Copy your personal **Web App URL**.

Keep this Web App URL ready - you will paste it into your iPhone Shortcut or Android Macro.

STEP 2 - Set Up Your Phone

For iPhone users

1. Open your purchased resources on your iPhone.
2. Download **iPhone Expense Tracker.shortcut**.
3. Open/import it in the Shortcuts app.
4. Paste your personal Web App URL where instructed.
5. Optionally edit the **Device Name** (for example: iPhone, Dad, Mom, etc.).
6. Optionally assign the Shortcut to **Back Tap** for quick access.

For Android users

1. Open your purchased resources on your Android phone.
2. Download **Android Expense Tracker.macro**.
3. Import it into MacroDroid.
4. Paste your personal Web App URL where instructed.
5. Edit the **Device Name** if you want.
6. Use the included trigger, or customize it according to your preference.

STEP 3 - Start Tracking Expenses

Enter your expense details from your phone. Your transaction will automatically be sent to your personal Google Sheet.

You can track: Date, Month, Time, Category, Amount, Payment Mode, Remarks and Device Name.

STEP 4 - Use the Interactive Dashboard

Open the **Expense Analytics Dashboard** in your Google Sheet to view your expenses visually. Use the available filters and date controls to analyze your spending.

Track Expenses From Multiple Devices

You and your family members can use the same Google Sheet. Simply connect each iPhone Shortcut or Android Macro to the same personal Web App URL and give each device a different Device Name.

Already purchased?

You do not need to buy the product again. Access your previous purchase using the same account details used during checkout, then open your purchased resources.

Quick Setup Flow

- 1. Laptop/Desktop:** Copy Google Sheet -> Deploy Apps Script -> Copy Web App URL
- 2. Phone:** Download the correct iPhone Shortcut or Android Macro -> Paste Web App URL
- 3. Start tracking:** Your expenses automatically appear in your Google Sheet and dashboard.

One-time purchase. No monthly subscription.
